RESEARCH INTERESTS	My interests range from stellar to solar physics; my main interests lie in the heating of the solar atmosphere, including active regions and loops. I have expertise in the analysis of spectroscopic and narrowband Extreme Ultra-Violet (EUV) and X-ray data from <i>SDO</i> and <i>Hinode</i> , in addition to the hard X-ray (HXR) imaging/spectroscopic observations from <i>NuSTAR's</i> heliophysics campaign. Furthermore, I am currently investigating the modelling of coronal loop light-curves using the EBTEL (Enthalpy-Based Thermal Evolution of Loops) hydrodynamics code with particular interest in the weak bremsstrahlung components, and the relevance for future soft to hard X-ray instruments and missions.
