**RESEARCH INTERESTS** My interests range from stellar to solar physics; my main interests lie in the heating of the solar atmosphere, including active regions and loops. I have expertise in the analysis of spectroscopic and narrowband Extreme Ultra-Violet (EUV) and X-ray data from the *Solar Dynamics Observatory* and *Hinode*, in addition to the hard X-ray (HXR) observations from *NuSTAR*'s heliophysics campaign. I am currently investigating the modelling of coronal loop light-curves using the EBTEL (Enthalpy-Based Thermal Evolution of Loops) hydrodynamics code with particular interest in the weak bremsstrahlung components, and the relevance for future soft to hard X-ray instruments and missions.

SUPA School of Physics and Astronomy  
Project: *The Energetics of Small Flares and Brightenings*

- Analysed observations of the Sun with *NuSTAR*, a telescope not designed for heliophysics. These observations are the most sensitive of their kind and have resulted in numerous, wide-ranging, highly-collaborative peer-reviewed publications.
- Analysed non-flaring coronal time-series in pursuit of signatures of the coronal heating mechanism. Techniques included time-lag analysis (cross-correlation), Fourier analysis, wavelet analysis, and local intermittency measure (LIM).
- Studied the temperature distribution of the solar atmosphere through the recovery of an ill-posed inverse problem (the differential emission measure, DEM) using techniques such as Tikhonov regularisation, Markov-chain Monte Carlo, and sparsity.
- The press-release image produced from the *NuSTAR* observations obtained for [Wright et al. 2017](#) was published by numerous news outlets, and is one of the five iconic images from *NuSTAR*'s first five years in space.

Collaborators: *Dr Iain Hannah, Dr Alexander MacKinnon*

**Visiting Researcher**, NASA Goddard Space Flight Center (GSFC) 2016  
Heliophysics Science Division

- Explored the possibility of implementing DEM maps in the [Helioviewer](#) project, and their usefulness as an input for various established analysis techniques.

Collaborators: *Dr Nicholeen Viall, Dr Jack Ireland*
