RESEARCH SUMMARY	My research interests are in solar and stellar physics, and my Ph.D. research has concentrated on one of the unsolved problems in Heliophysics – the coronal heating problem. During my Ph.D. I have gained expertise in numerous time-series analysis techniques and methods for recovering the differential emission measure (an ill-posed inverse problem) from a wide range of spectroscopic and narrowband data. I am also a member of the <i>NuSTAR</i> Heliophysics working group and I led the analysis of the first solar flare observed by the <i>NuSTAR</i> hard X-ray <i>astrophysics</i> imaging spectrometer. I have also developed a stellar flare detection algorithm based on the observations obtained by the <i>Kepler</i> space telescope to determine the superflare rate of the Sun.	
EDUCATION	University of Glasgow , Glasgow, UK	2014 – present
	Ph.D. Solar Physics Thesis Topic: <i>The Energetics of Small Flares and Brightenings</i> Advisers: Dr Iain G. Hannah, Dr Alexander MacKinnon	
	University of Southampton , Southampton, UK	2010 – 2014
	MPhys Astrophysics with a year abroad First-class honours (1:1) Adviser: Professor Malcolm Coe	
	Harvard University/Harvard-Smithsonian CfA , Cambridge, MA, USA	2013 – 2014
CURRENT ACADEMIC APPOINTMENTS	MPhys Astrophysics with a year abroad Thesis Topic: <i>The Superflare Rates of Solar-Like Stars</i> Advisers: Dr Steven H. Saar, Dr Jeremy J. Drake	
	Researcher, NASA Frontier Development Lab (FDL) SETI Institute/NASA Ames Research Center, Mountain View, CA	2018 – present
	Project: <i>Predicting Solar Spectral Irradiance from SDO/AIA Observations</i>	
	<ul style="list-style-type: none">• An 8-week applied Artificial Intelligence accelerator established to tackle knowledge gaps useful to NASA’s science and exploration goals, and humanity.• Implemented Deep Learning algorithms (Convolutional Neural Networks; CNNs) such as U-Net, AlexNet and ResNet to predict disk-integrated Solar Spectral Irradiance (SSI) observed by <i>SDO/EVE</i> (MEGS-A) from high-resolution <i>SDO/AIA</i> images which share a common latent space.• Predicted MEGS-A SSI with average relative discrepancies of less than 3% using a Residual Neural Network (ResNet) augmented with a Multi-Layer Perceptron (MLP).• Used a 1x1 CNN (equivalent to an MLP) to improve the computational speed for differential emission measure (DEM) inversion. Further improvement to the resulting DEMs were obtained by training a CNN to correct the DEMs to minimise the residual between observed and synthesized SSI.• Received the NASA Frontier Development Lab “Contribution to Science” award.	
	Affiliate Staff Member, University of Glasgow SUPA School of Physics and Astronomy	2017 – present
	<ul style="list-style-type: none">• Using the EBTEL hydrodynamics code to model light curves from coronal loops. The parameter space of these simulations will be constrained by observations obtained during the <i>NuSTAR</i> heliophysics campaign, and these simulations will be used to test a variety of analysis techniques.	

PREVIOUS ACADEMIC APPOINTMENTS	Post-Graduate Research Assistant, University of Glasgow 2014 – 2017 SUPA School of Physics and Astronomy Project: <i>The Energetics of Small Flares and Brightenings</i> <ul style="list-style-type: none"> Analysed observations of the Sun with <i>NuSTAR</i>, a telescope not designed for helio-physics. These observations are the most sensitive of their kind and have resulted in numerous, wide-ranging, highly-collaborative peer-reviewed publications. Analysed 20 million non-flaring coronal time-series in pursuit of signatures of the coronal heating mechanism. Techniques included time-lag analysis (cross-correlation), Fourier analysis, wavelet analysis, and local intermittency measure (LIM). Studied the temperature distribution of the solar atmosphere through the recovery of an ill-posed inverse problem (the differential emission measure, DEM) using techniques such as Tikhonov regularisation, Markov-chain Monte Carlo, Spline fitting, and Sparse Inversion (by Basis Pursuit). The press-release image produced from the <i>NuSTAR</i> observations obtained for Wright et al. 2017 was published by numerous news outlets and is one of the five iconic images from <i>NuSTAR</i>'s first five years in space. Primary Collaborators: <i>Dr Iain Hannah, Dr Alexander MacKinnon, Dr Hugh Hudson, Dr Paulo Simões</i>
	Visiting Researcher, NASA Goddard Space Flight Center (GSFC) 2016 Heliophysics Science Division <ul style="list-style-type: none"> Explored the possibility of implementing DEM maps in the Helioviewer project, and their usefulness as an input for various established analysis techniques. Collaborators: <i>Dr Nicholeen Viall, Dr Jack Ireland</i>
	Research Scholar, Harvard-Smithsonian Center for Astrophysics (CfA) 2013 – 2014 Solar and Stellar X-ray Group <ul style="list-style-type: none"> Designed and implemented a sophisticated stellar flare detection routine for long-cadence (30 mins) <i>Kepler</i> data obtained from a proprietary set of spectroscopically verified solar-type stars in three open clusters. A preliminary report on this work had coverage by Science and the Smithsonian Magazine. Collaborators: <i>Dr Steven Saar, Dr Søren Meibom, Dr Jeremy Drake, Dr José D. do Nascimento Jr, Dr Vinay Kashyap</i>
	Summer Research Intern, University of Southampton 2013 Astronomy Group <ul style="list-style-type: none"> Investigated the presence of double blue straggler sequences in globular clusters using Hubble Space Telescope (ACS, WFPC2) data. Collaborators: <i>Dr Andrea Dieball</i>
