RESEARCH INTERESTS	My interests range from stellar to solar physics; my main interests lie in the heating of the solar atmosphere, including active regions and loops. I have expertise in the analysis of spectroscopic and narrow-band Extreme Ultra-Violet (EUV) and X-ray data from the <i>SDO</i> , and <i>Hinode</i> satellites, in addition to the hard X-ray (HXR) imaging/spectroscopic observations from <i>NuSTAR's</i> heliophysics campaign. Furthermore, I am currently investigating the modelling of coronal light-curves using the EBTEL (Enthalpy Based Thermal Evolution of Loops) hydrodynamic code with particular interest in the weak bremsstrahlung components.

CURRENT ACADEMIC APPOINTMENT	Affiliate Staff Member , University of Glasgow SUPA School of Physics and Astronomy	2017 – present
PREVIOUS ACADEMIC APPOINTMENTS	Post-Graduate Research Assistant , University of Glasgow SUPA School of Physics and Astronomy Project: <i>The Energetics of Small Flares and Brightenings</i> <ul style="list-style-type: none">Analysed observations of the Sun with <i>NuSTAR</i>, a telescope not designed for heliophysics. These observations are the most sensitive of their kind and have resulted in numerous, wide-ranging highly-collaborative peer-reviewed publications.Analysed non-flaring coronal time-series in pursuit of signatures of the coronal heating mechanism. Techniques included time-lag analysis (cross-correlation), Fourier analysis, wavelet analysis, and local intermittency measure (LIM).Studied the temperature distribution of the solar atmosphere through the recovery of an ill-posed inverse problem (the differential emission measure, DEM) using techniques such as Tikhonov regularisation, Markov-Chain Monte Carlo, and sparsity.The press-release image produced from the <i>NuSTAR</i> observations obtained for Wright <i>et al.</i> 2017 was published by numerous news outlets, and is one of the five iconic images from <i>NuSTAR's</i> first five years in space. Collaborators: Dr Iain Hannah, Dr Alexander MacKinnon	2014 – 2017
	Visiting Researcher , NASA Goddard Space Flight Center (GSFC) Heliophysics Science Division <ul style="list-style-type: none">Worked on the possibility of implementing DEM maps in the Helioviewer project, and their usefulness as an input for various established analysis techniques. Collaborators: Dr Nicholeen Viall, Dr Jack Ireland	2016
	Research Scholar , Harvard-Smithsonian Center for Astrophysics (CfA) Solar and Stellar X-Ray Group <ul style="list-style-type: none">Designed and implemented a sophisticated stellar flare detection routine for long-cadence (30 mins) <i>Kepler</i> data obtained from a proprietary set of spectroscopically verified solar-type stars in three open clusters.A preliminary version of this work had coverage by Science, and The Smithsonian Magazine. Collaborators: Dr Steven Saar, Dr Søren Meibom, Dr Jeremy Drake, Dr Vinay Kashyap	2013 – 2014
